01 Brand foundation

What Nutrio stands for and how it should feel

Brand purpose

Help people make healthier daily choices by connecting balanced meals, personalized nutrition, activity, and gym access in one simple experience.

Mission

Make healthy living convenient, motivating, and personal - without making users feel judged, overwhelmed, or excluded.

Vision

Become the region's most trusted everyday wellness companion, starting with a mobile experience designed around real routines and culturally relevant habits.

Brand promise

Healthy progress made simple, personal, and achievable.

Personality

- Fresh, intelligent, and encouraging
- Premium but approachable
- Energetic without being aggressive
- Simple without feeling empty
- Supportive and non-judgmental
- Local-aware and bilingual by design

Positioning

Nutrio is not only a food-delivery app, calorie tracker, or gym directory. It is a unified wellness platform that turns healthy intent into practical daily action.

Primary audiences

- Busy adults who want structured healthy meals
- People working toward weight loss, muscle gain, or better daily balance
- Users who want simple guidance rather than complex medical dashboards
- Restaurant, gym, and delivery partners who need a trusted premium platform

02 Logo system

Recognition, protection, and practical usage

Meaning

- The bowl represents nourishment and everyday meals.
- The leaf expresses freshness, health, and growth.
- The circular path represents continuity, lifestyle, and daily progress.
- The checkmark represents achievement and confidence.
- The colored segments represent a balanced mix of nutrition, hydration, activity, and motivation.

Clear space and minimum size

Maintain clear space equal to the height of the checkmark circle around all sides of the primary logo. For digital use, the full vertical logo should not be smaller than 96 px wide. Use the symbol-only version below that size. Recommended app-icon symbol padding is 16-20% of the icon canvas.

Approved variants

- Primary full-color logo on white or very light backgrounds
- Reversed full-color logo on Deep Navy
- Symbol-only app icon
- One-color Deep Navy mark for documents
- One-color white mark for dark surfaces

Never

- Stretch, rotate, crop, outline, or recolor individual elements
- Add glow, heavy shadow, bevel, or 3D effects
- Place on busy or low-contrast photography
- Rebuild the wordmark using another font
- Repeat the complete logo as decoration inside every screen

03 Color system

A balanced palette derived from the supplied logo

Deep Navy
#0C1223

Turquoise
#1BBA97

Periwinkle
#6F7FF3

Sky Blue
#41BAFA

Orange
#FC6B07

Coral
#FC616A

White
#FFFFFF

Soft Background
#F6F8FC

Core usage

- Deep Navy: structure, primary text, navigation, trust, premium surfaces.
- Turquoise: health, positive action, nutrition progress, success.
- Periwinkle: AI Coach, personalization, achievements, premium intelligence.
- Sky Blue: hydration, activity, information, movement.
- Orange: energy, calories, urgency, important highlights.
- Coral: warnings, errors, missed actions, attention states.

Color discipline

A normal screen should use one dominant accent and one supporting accent, with Navy and neutral surfaces providing structure. Do not display all accent colors at equal strength. Color must support hierarchy rather than replace it.

Approved gradients

- Turquoise → Sky Blue for progress and movement
- Periwinkle → Sky Blue for AI and personalized intelligence
- Orange → Coral for energy and celebration
- Deep Navy → Dark Navy for premium dark surfaces

Gradients are reserved for progress, selected states, hero moments, and small branded accents. They are not default button or card backgrounds.

04 Typography

Clear, friendly, bilingual, and mobile-ready

Recommended families

English: Inter or Inter Display. Arabic: Noto Sans Arabic or IBM Plex Sans Arabic. Use one Arabic family consistently across the product. Numeric metrics should remain highly legible and may use Inter even in Arabic screens when culturally and technically appropriate.

Style	Size	Weight	Line height	Use
Display	32	700	38	Campaign and onboarding hero
Screen title	24	700	30	Primary screen heading
Section title	18	650	24	Section hierarchy
Body	16	400	24	Main reading text
Body small	14	400	20	Supporting information
Label	13	600	18	Inputs and controls
Caption	12	500	16	Metadata and helper text
Metric	32-48	700	1.0	Calories, progress, weight

Rules

- Never shrink text to force dense content into a phone screen.
- Use sentence case, short titles, and strong hierarchy.
- Avoid overly technical or clinical styling.
- Test long Arabic labels and mixed Arabic-English nutrition units.
- Maintain at least 4.5:1 contrast for normal text.

05 Shape language

The logo becomes a system, not repeated decoration

Core forms

- Segmented arcs for progress and selected states
- Organic leaf-like masks for meals and wellness imagery
- Soft asymmetry to avoid generic component-library geometry
- Circular motion for daily journeys and achievements
- Rounded edges with varied radii, not one radius everywhere
- Small color fragments used as visual anchors, never as random decoration

Where to apply

- Onboarding illustrations and goal setup
- Daily progress and nutrition summaries
- Meal imagery and timeline transitions
- AI Coach and achievement moments
- Bottom-navigation active state
- Empty, success, and loading states

Avoid

Do not turn every panel into a rounded card. The shape language should guide composition, spacing, images, and progress - not create more decorative containers.

06 Photography and illustration

Food should feel real, fresh, and desirable

Photography direction

- Natural light, fresh ingredients, realistic color, and visible texture
- Premium but achievable meals - not overly staged luxury food
- Human moments should feel active, diverse, and authentic
- Use close crops and organic masks to make food the visual focus
- Maintain consistency in warmth, contrast, and background cleanliness

Avoid

- Dark, oversaturated, low-resolution, or artificial food images
- Generic stock fitness poses and unrealistic body ideals
- Busy backgrounds that compete with nutrition information
- Applying a different filter or crop style on every screen

Illustration style

Use simplified organic geometry, smooth curves, limited depth, soft lighting, and selective Nutrio accents. Illustrations should be modern and premium rather than childish. Human illustrations must be inclusive and never promote unrealistic body standards.

Image treatment

- Organic or asymmetrical crops
- Edge-to-edge food imagery where appropriate
- Soft Navy or neutral overlays for text readability
- Floating nutrition labels used sparingly
- Consistent aspect ratios by content type

07 Mobile UI principles

Mobile first - custom by default

Design foundations

- Start at 360-430 px widths; never shrink a desktop dashboard.
- Prioritize one clear task and one focal point per screen.
- Place frequent actions within comfortable thumb reach.
- Use bottom sheets, full-screen flows, lists, and timelines instead of desktop modals and tables.
- Use cards only when content truly needs an independent container.
- Design loading, empty, offline, error, disabled, and success states from the start.

Spacing and interaction

Page padding	16-20 px
Major section gap	24-32 px
Related item gap	8-12 px
Minimum touch target	44 x 44 px
Primary button height	50-56 px
Input height	52-56 px

Generic UI is not acceptable

- No repeated four-card statistics grid
- No card-inside-card composition
- No default Shadcn, Material, Bootstrap, or generic Tailwind appearance
- No desktop sidebar as primary mobile navigation
- No color-only redesign of a generic template
- No wide table compressed into a phone

08 Components and data visualization

Reusable patterns with a recognizable Nutrio character

Core mobile component set

- Nutrio App Header
- Nutrio Bottom Navigation
- Primary, secondary, text, destructive, and icon buttons
- Mobile inputs, steppers, sliders, segmented controls, and selection sheets
- Meal timeline and meal preview
- Nutrition progress arc and integrated metric display
- AI Coach recommendation block
- Goal and achievement presentation
- Gym access and subscription status
- Bottom sheets, confirmation sheets, toast messages
- Loading, empty, error, offline, and success states

Component states

Each reusable component must define default, pressed, focused, selected, disabled, loading, success, error, and RTL behavior where relevant.

Data visualization

- Use segmented arcs, progress paths, thin indicators, large numeric values, and daily timelines.
- Do not display calories, protein, water, and activity as identical cards.
- Use text or symbols in addition to color, so status remains accessible.
- Keep charts understandable at 360 px without mandatory horizontal scrolling.

Bottom navigation

Use four or five primary destinations. The active state should use a subtle arc, segment, or organic highlight inspired by the logo. It must respect safe areas, never cover content, and work structurally in RTL and LTR.

09 Motion and interaction

Purposeful movement that reinforces progress

Motion principles

- Fast, subtle, responsive, and meaningful
- Show cause and effect rather than decoration
- Use movement to confirm selection, progress, navigation, and completion
- Respect reduced-motion preferences

Motion	Duration	Guidance
Tap feedback	80-140 ms	Immediate compression, opacity, or scale response
Page transition	220-320 ms	Smooth and directional
Bottom sheet	260-360 ms	Natural deceleration with clear drag affordance
Progress update	400-700 ms	Animate from previous value, not from zero every time
Achievement	600-1000 ms	Celebratory but brief; never block the user

Interaction tone

The product should feel responsive and encouraging. Avoid excessive bouncing, floating decoration, long loaders, and animation that hides delays or prevents immediate action.

10 Voice and tone

Supportive, clear, and never judgmental

Voice characteristics

- Friendly and human
- Positive but realistic
- Clear and action-oriented
- Motivating without guilt or pressure
- Simple, culturally respectful, and bilingual

Writing principles

- Say what happened, why it matters, and what the user can do next.
- Use short labels and concrete actions.
- Avoid medical claims, shame, fear, or unrealistic promises.
- Celebrate consistency and progress, not perfection.

Situation	English	Arabic
Welcome	Good to see you. Let's plan a balanced day.	سعداء بعودتك. لنخطط ليوم متوازن.
Progress	You're getting closer to today's goal.	أنت تقترب من هدف اليوم.
Missed meal	Plans change. Choose a new time or replace this meal.	تتغير الخطط. اختر وقتاً جديداً أو استبدل هذه الوجبة.
Error	We couldn't load this right now. Try again.	تعذر تحميل المحتوى حالياً. حاول مرة أخرى.
Achievement	Great consistency - you completed your weekly goal.	استمراريتك رائعة - أكملت هدفك الأسبوعي.

11 Arabic RTL and accessibility

Inclusive by structure, not as an afterthought

RTL requirements

- Mirror layout direction, navigation, arrows, and directional gestures - not only text alignment.
- Test mixed Arabic and English names, units, numbers, dates, and prices.
- Allow long Arabic labels to wrap naturally without clipping.
- Review bottom-navigation order and back behavior in each language.
- Use Arabic fonts with clear weights and comfortable line height.

Accessibility baseline

- WCAG AA contrast for essential text and controls
- Minimum 44 x 44 px touch targets
- Visible focus and selected states
- Never communicate meaning using color alone
- Screen-reader labels for icons, progress, images, and controls
- Alternative text for meaningful food and campaign imagery
- Reduced-motion support
- Dynamic text scaling without broken layouts

Health and body language

Nutrio must avoid shaming language, unrealistic body comparisons, and appearance-based pressure. Progress communication should focus on healthy routines, personal goals, energy, consistency, and user choice.

12 Implementation checklist

How to keep every future screen unmistakably Nutrio

Design system assets

- Figma color, typography, effect, and spacing styles
- Semantic design tokens for light and dark surfaces
- Reusable mobile components with states and RTL variants
- Approved screen patterns for onboarding, home, meals, progress, AI Coach, gyms, subscriptions, and profile
- A library of approved photography, illustrations, and iconography
- A gallery of approved and rejected UI examples with reasons

Recommended token naming

- color.background.primary
- color.surface.elevated
- color.text.primary
- color.action.primary
- color.status.success
- color.status.error
- color.nutrition.progress
- color.hydration
- color.ai.primary
- spacing.page.mobile
- size.touch.minimum
- motion.duration.fast

Pre-release review

- ☐ Designed mobile-first at 360, 390, and 430 px
- ☐ Clearly feels like Nutrio rather than a generic health template
- ☐ One dominant focal point and clear primary action
- ☐ No unnecessary card grid or default library appearance
- ☐ Real content and long text tested
- ☐ Arabic RTL and English LTR tested
- ☐ Loading, empty, error, offline, and success states included
- ☐ Contrast, touch targets, labels, and reduced motion checked
- ☐ Bottom navigation and keyboard never cover actions
- ☐ Existing APIs, routes, logic, and permissions preserved

Final brand test

If the logo were removed, the product should still be recognizable as Nutrio through its color discipline, arcs, organic imagery, progress language, mobile composition, and supportive tone.
